

## Wealth Matters – October motion graphic

# Are you plugged into your cybercrime risk?

We all know to avoid suspicious emails about offers that seem too good to be true...

But cybercriminals are getting smarter.

Meaning: Millions of people are still hit by attacks.

The estimated cost of this in 2016-2017 was £4.6 billion.<sup>1</sup>

Fraudsters know your weaknesses. Do you?

So, what can make you vulnerable?

Free wi-fi hotspots and smart home technology can allow a thief to hijack your device, and steal your money or private data.

90% of cybercrime occurs through email, letting hackers take over your entire computer system, or all of your accounts.

But, even in a digital world, you can help protect you and your family's wealth.

For more information on keeping your finances safe from cybercriminals, get in touch with your Relationship Manager
